

The new Hawa Combino

Experience the
lightness of sliding –
with 16 designs

Hawa Combino – now also with even more flexibility and comfort

Realizing cabinets with wooden doors in 16 different designs with a single fitting system: Made possible by Hawa Combino. Because this versatile fitting system has been completely redesigned in accordance with the rulebook of the art of sliding. It is therefore in a different league, not only with regard to flexibility but also comfort. Smoother and quieter than ever before, the sophisticated Hawa Combino sliding system even moves heavy wooden sliding doors weighing up to 80 kg with a minimal amount of effort. Accompanied by an innovative soft closing mechanism at both sides, which doesn't even stop at constructions with center doors.

But there's more: the invisible technology and stylish handle solutions that are coordinated with the system guarantee that cabinet solutions with Hawa Combino also fulfil all aesthetic requirements.

Hawa Combino in the living room: Comfort that you would like to live in

Superior sliding system:
for cabinet doors weighing
between 20 and 80 kg.

There are clear reasons why
even heavy wooden doors
with floor-to-ceiling designs
can be moved silently and
smoothly like never before
with Hawa Combino.

High quality Hawa Comfort Roller

Unlike conventional designs, the roller geometry of the newly developed Hawa Comfort Roller is based on a two-surface roller support. This reduces the amount of force that is required and the amount of noise during the sliding movement, and makes uniquely smooth, silent running possible.

Advanced soft closing technology

The interaction of the special arrangement of the individual components in the soft closing mechanism and extremely noise-reducing materials provides harmonious, uniform force progression over the entire sliding movement. The Hawa Combino fittings for doors weighing between 50 and 80 kg are also available with a modern, two-sided center door soft closing mechanism.

Stability thanks to straightening fitting

No door warping, even after years: The new straightening fitting for the Hawa Combino stabilizes wooden doors weighing up to 80 kg. It blends into the surface of the door in a filigree way, can be glued on or fitted with brackets, and is now also available in the elegant anodized black designer version.

16 designs at a glance

Two and three door cabinet solutions for door thicknesses of 19 to 40 mm and doors weighing up to 80 kg.
